BACKGROUND

One of Victoria's largest Government owned retail water corporations providing regional drinking water, sewerage, trade waste, recycled water and water-saving services for Melbournians, is undergoing a large-scale water meter exchange project outlining the integration of workflows across systems.

CHALLENGE

Their team required trusted resources to implement and test workflow integration for accurate and secure storage of data collected from newly installed water meters in homes around Melbourne.

SOLUTION

KJR was engaged to conduct Quality Assurance services and verified integration of PEGA tools within Hiaffinity, Boomi, Salesforce and IOT applications to ensure accurate and secure collection of data from water metres. This process outlines the development of service requests from individual metres for the creation of client records that are stored in the organisation local CRM (diagram 1.1 below).

Case progress in Pega for meter exchange
